

Saltwater Pool Systems Using Ramuc Coatings

Pools with saltwater systems can be successfully painted using epoxy coatings from Ramuc such as **EP Epoxy™** or **HI Build Epoxy™**.

NOTE: Hi Build Epoxy is available in a 3:1 ratio one gallon kit, as well as a 1:1 ratio two gallon kit.

- ❖ If painting a previously painted pool, please follow the instructions in the video “How To: Paint Your Pool With Ramuc Pool Paint” found on the Ramuc website. Use the compatible coating listed above.
- ❖ If painting fiberglass, bare or sandblasted concrete or plaster, follow the instructions for bare surfaces. We recommend using Ramuc Hi Build Epoxy on any bare surface, particularly for saltwater protection.

Surface preparation is extremely important to assure adequate coating performance. For complete surface preparation, we recommend Ramuc Clean & Prep Solution™.

For around the top edge, stairs, and ladders we also offer Ramuc Coping Spray Paint to help you complete the job.
